### **Part III DETAILED ACTION**

Claims 7-29 are currently pending.

#### ***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-13, drawn to a polynucleotides, their fragments, expression vectors and cells comprising the vector, classified in class 536, subclass 23.1 and class 935, subclass 66.
- II. Claims 27-29, drawn to method of making polypeptides, classified in class 935, subclass 60

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the product as claimed can be used in a materially different processes such as screening assays, and the protein obtained by the claimed method can be obtained by other methods, such as peptide synthesis.

Because these inventions are distinct for the reasons given above and have acquired a separate

status in the art as shown by their different classification, and because of their recognized divergent subject matter, and the necessity for non-coextensive literature searches restriction for examination purposes as indicated is proper.

Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

If applicant elects claims directed to the product, and a product claim is subsequently found allowable, withdrawn process claims which depend from or otherwise include all the limitations of the allowable product claim will be rejoined. (MPEP 821.04)
